Use the 2025 and 2026 avocado files and only the data to create a 2 page memo. Address this memo to a mid level manager, Nathan Daniels, and the mission is to understand the trends in the Avocado market in the USA. The memo should be no longer than 2 pages long.

Worked for 21s

Below is a memo using **only the data in the 2025 and 2026 avocado files**. The 2026 file contains data through **Week 32**, so the year-over-year comparison uses Weeks 1–32 of both years.

Avocado Market Trends in the USA

To: Nathan Daniels, Mid-Level Manager

From: Nathan Daniels

Date: September 25, 2026

Subject: Trends in the U.S. Avocado Market

Overview

The 2025 and 2026 avocado datasets show that the U.S. avocado market experienced higher volume but lower average selling prices during the first 32 weeks of 2026 compared with the same period in 2025. Total U.S. avocado volume increased from approximately **1.87 billion** units in Weeks 1–32 of 2025 to **2.13 billion** in 2026, an increase of **13.6%**. At the same time, the volume-weighted average selling price decreased from approximately **\$1.25 to \$1.01**, a decline of **19.1%**.

Volume and Price Trends

Measure	2025 Weeks 1–32	2026 Weeks 1–32	Change
Total Bulk and Bags	1.87 billion	2.13 billion	+13.6%
Volume-weighted ASP	\$1.25	\$1.01	-19.1%
Conventional Volume	1.76 billion	2.02 billion	+14.5%
Organic Volume	105.9 million	105.1 million	-0.7%

Bagged Volume	782.3 million	919.8 million	+17.6%
---------------	---------------	---------------	--------

The increase in total volume was primarily driven by conventional avocados. Conventional volume increased **14.5%**, while organic volume was nearly unchanged, declining by **0.7%**. Organic avocados also had a higher average selling price than conventional avocados in both years. The volume-weighted organic ASP decreased from approximately **\$1.74 in 2025 to \$1.56 in 2026**, while the conventional ASP decreased from approximately **\$1.22 to \$0.98**.

The data also show an increase in the share of total volume sold as bagged avocados. Bagged volume increased from **782.3 million** to **919.8 million**, while its share of total volume increased from approximately **41.8% to 43.3%**.

Product Trends

The individual categories in the dataset also changed between the first 32 weeks of 2025 and 2026. The **4046** category increased by approximately **2.5%**, from 867.2 million to 889.1 million. The **4225** category increased by **35.6%**, from 197.3 million to 267.5 million. The **4770** category experienced the largest percentage increase, rising by approximately **106.6%**, from 23.9 million to 49.5 million.

Within bagged avocados, the largest increase occurred in **X-Large Bagged**, which increased from approximately 6.7 million to 21.3 million, or **215.3%**. Large Bagged volume increased by **57.3%**, while Small Bagged volume increased by **11.9%**. These changes contributed to the overall increase in bagged volume during 2026.

Geographic Trends

All eight regional geographic categories in the datasets showed higher volume during Weeks 1–32 of 2026 compared with the same period in 2025. The largest percentage increase occurred in the **Southeast**, where volume increased approximately **19.8%**. California increased **15.0%**, the Midsouth increased **14.8%**, and South Central increased **14.2%**.

The Northeast increased by **13.7%**, followed by the Great Lakes at **12.6%**, the Plains at **11.3%**, and the West at **7.0%**. California had the largest volume among these geographic categories in both years, with approximately **292.6 million** in 2025 Weeks 1–32 and **336.4 million** in 2026 Weeks 1–32.

Conclusion

The data indicate that the U.S. avocado market had substantially higher volume during the first 32 weeks of 2026 while selling at lower average prices than during the same period in 2025. The increase in volume was concentrated primarily in conventional avocados, while organic volume remained relatively stable. Bagged volume also grew faster than total market volume, increasing its share of the market. Across the regional categories provided in the datasets, every region recorded an increase in volume, with the Southeast showing the largest percentage increase.

For the remainder of 2026, these trends provide a basis for monitoring whether higher avocado volume and lower selling prices continue through the rest of the year.

This version is structured to fit within **two pages** under normal memo formatting (12-point font, standard margins, and single/1.15 spacing).
