Use the 2025 and 2026 avocado files and only the data to create a 2-page memo. Address this memo to a mid-level manager, Nathan Daniels, from you the AI. The mission is to understand the trends in the Avocado market in the USA. Use the periods as the main measure of time. The memo should be no longer than 2 pages long.

Worked for 54s

Here is the memo based only on the **2025 and 2026 avocado files**, using **Total U.S.** and **Period** as the primary time measure.

Avocado Market Trends in the USA

To: Nathan Daniels, Mid-Level Manager

From: AI

Date: September 27, 2026

Subject: Avocado Market Trends in the USA

Purpose

The purpose of this memo is to identify trends in the U.S. avocado market using the data from the 2025 and 2026 files. The analysis uses **Period** as the main measure of time and focuses on the **Total U.S.** data. The 2025 file contains 52 periods, while the 2026 file contains 32 periods, so the year-over-year comparison focuses on Periods 1–32, which are available in both files.

Overall Market Volume

Total avocado volume increased during the first 32 periods of 2026 compared with the same periods in 2025. Total volume was approximately **1.871 billion** in Periods 1–32 of 2025 and **2.126 billion** in Periods 1–32 of 2026, representing an increase of approximately **13.6%**.

The increase was primarily driven by conventional avocados. Conventional volume increased from approximately **1.765 billion** in Periods 1–32 of 2025 to **2.021 billion** in the same periods of 2026, an increase of approximately **14.5%**. Conventional volume was higher in **all 32 comparable periods**.

Organic avocado volume was much more stable. It decreased slightly from approximately **105.9 million** in Periods 1–32 of 2025 to **105.1 million** in 2026, a decrease of approximately **0.7%**. Organic volume increased in only 9 of the 32 comparable periods.

Average Selling Price

Average selling prices were lower in 2026 during the first 32 periods. The volume-weighted ASP across both types decreased from approximately **1.245** in Periods 1–32 of 2025 to **1.008** in 2026, a decrease of approximately **19.1%**.

The decline occurred for both types. Conventional ASP decreased from approximately **1.215** in 2025 to **0.979** in 2026, while organic ASP decreased from approximately **1.741** to **1.562**. Conventional ASP was lower in every comparable period, and organic ASP was also lower in every comparable period.

Within 2026, conventional volume reached its highest level in **Period 6**, at approximately **75.97 million**, before declining to approximately **54.22 million** in Period 26 and ending at approximately **57.79 million** in Period 32. Conventional ASP followed a different pattern, reaching its lowest level in Period 6 at approximately **0.892** and its highest level in Period 26 at approximately **1.187**.

Product Mix

The market remained heavily concentrated in conventional avocados. Conventional products represented approximately **94.3%** of total volume during Periods 1–32 of 2025 and approximately **95.1%** during the same periods of 2026. Organic's share therefore decreased from approximately **5.7%** to **4.9%**.

The product categories also changed in their shares of total volume. The **4046** category accounted for approximately **46.4%** of volume in Periods 1–32 of 2025 compared with **41.8%** in 2026. The **4225** category increased from approximately **10.5%** to **12.6%**, while **4770** increased from approximately **1.3%** to **2.3%**. Total bagged volume increased from approximately **41.8%** to **43.3%** of total volume.

Conclusion

The data shows that the U.S. avocado market had **higher volume but lower ASP** during Periods 1–32 of 2026 compared with the same periods in 2025. The increase in total volume was almost entirely associated with conventional avocados, while organic volume remained relatively stable. At the same time, ASP decreased for both conventional and organic avocados.

Overall, the period-to-period data indicates that **more avocado volume was sold at lower average selling prices in 2026**, with conventional avocados continuing to account for the large majority of the U.S. market.

This version is designed to stay within **two pages** in a standard memo format while keeping the analysis strictly tied to the uploaded data.
